Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 08 July 2003.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

DETAILED ACTION

General Status

1. This is a first action on the merits of application filed on September 8, 2003. Claims 1-6 are pending and are being examined.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Drawings

3. Figures 6A-6C, 7A, and 7B should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

5. Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 2832

Regarding claim 1, applicant states, "...and which control a position of said magnetic." Of magnetic what? Examiner did not know what applicant was referring to. Correction/clarification is requested.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Applicant's Own Admitted Prior Art in view of U.S. Patent Number 6,154,113 to Murai.

Regarding claims 1, 2, and 4, Applicant admits on page 1 of the disclosure that transformers comprising magnetic cores having two separate sections and bobbins having a magnetic wire wound there around have been known in the art. Applicant further admits that varnish impregnation is a well-known treatment for improving insulation performance of winding sections and to enhance stabilities against electrical and mechanical oscillation.

Applicant admits the claimed invention except for the spacing mechanisms.

Murai discloses a transformer assembly having bobbin structures, wherein the primary bobbin comprises an insertion portion provided with linear ribs extending in the longitudinal direction. Each inner surface has two ribs respectively positioned at upper and lower sides (figures 2 and 3). It can be seen in figure 3 that the ribs simply position/space and contain certain elements of the device.

One skilled in the art, at the time the invention was made, would have found it obvious to combine the teachings of the Applicant's Own Admitted Prior art and Murai and incorporate ribs on the inner walls of the insertion portion of the bobbin in order to aid in the positioning/spacing of elements being inserted within the bobbin.

Regarding claim 3 and 6, Murai further illustrates in figure 2 that ribs form a symmetrical relationship along inner walls of the bobbin to aid in the positioning of elements being inserted.

Regarding claim 5, Applicant's Own Admitted Prior Art in view of Murai discloses the claimed invention except for the core spacing mechanisms being two separate dot projections. It would have been obvious to one having ordinary skill in the art to utilize different shapes of projections/ribs, since applicant has not disclosed that the dot projections solves any stated problem or is for any particular purpose and it appears that the invention would perform equally well with any shaped projection. Furthermore, applicant admits on page 5 of the disclosure that the spacing mechanisms DO NOT have to be formed into linear ridges.
